

## Kappa Data Expands Portfolio with JumpCloud for Identity and Device Management

*Kappa Data, a leading value-added distributor operating in Benelux, France and Poland, is pleased to announce the latest expansion of its network and cyber security portfolio across the group. We are proud to welcome JumpCloud, a leading platform for Identity and Device Management.*

JumpCloud provides organizations with a single, centralized portal to manage user identities and devices. It seamlessly integrates with existing identity providers such as Entra ID and Active Directory and supports authentication via all the major authentication protocols such as SAML, OpenID, RADIUS, and LDAP, making identity management more efficient and flexible.

Beyond identity management, JumpCloud offers an open platform for device management, supporting all major operating systems, including Windows, macOS, Android, iOS, and Linux. This ensures organizations can maintain security and compliance across diverse IT environments.

This results in huge time savings for system and network administrators by providing them with a single portal where everything regarding identity and device management is managed.

The addition of JumpCloud aligns perfectly with Kappa Data's Cybersecurity vision: every security strategy starts with knowing who and what needs protection. By covering both identity and device security, JumpCloud helps businesses address today's growing compliance challenges, including NIS2 and ISO 27001.

With JumpCloud in our portfolio, we continue to support our customers in building a secure, scalable, and future-proof IT environment.
